<ul> <li>A protocol for describing the shared content on social media platforms</li> <li>A protocol for encrypting data transmitted over the internet</li> </ul>		
A protocol for encrypting data transmitted over the internet	. 1	What is Open Graph protocol (OGP)?
	(	A protocol for describing the shared content on social media platforms
A protocol for sending and receiving email messages	(	A protocol for encrypting data transmitted over the internet
	(	A protocol for sending and receiving email messages
A protocol for transmitting audio and video over the internet	(	A protocol for transmitting audio and video over the internet

$\odot$	Correct
	That's correct. The Open Graph protocol is a protocol for sharing content on social media platforms. It
	allows developers to specify how content should be displayed when shared on social media sites such as

HTML meta tags are used to provide information about a webpage to search engines and other web services.

1/1 point

True

False

✓ Correct

Facebook.

That's correct. HTML meta tags provide information about a webpage, such as its title, description and keywords, to search engines and other web services. This information is used to help search engines understand the webpage's content and improve its ranking in search results.

5. Which of the following meta tags are valid? Choose all that apply.

1/1 point

responsive

description

✓ Correct

That's correct. The **description** tag is a valid HTML meta name used to specify a description of the content of a webpage.

√ viewport

✓ Correct

That's correct. This is a valid HTML meta name used to specify the viewport for a webpage. The viewport is the area of the webpage that is visible to the user and determines how the webpage is displayed on different devices.

✓ og:title

✓ Correct

That's correct. The **og:title** is a valid Open Graph protocol (OGP) meta name used to specify the title of a webpage when it is shared on social media platforms.
